

insparx GmbH was founded in March 2010 as a shared service center for a group of successful internet companies, among be2, some of which have been trading since 2004.

From its Head Office in Munich insparx GmbH currently supports 9 partner companies providing services such as Finance, Human Resources, (Online) Marketing, Customer Relationship Management, Customer Service and Business Intelligence; and helping to develop their online businesses at an international level.

Working with insparx, several partners have seen rapid growth and successfully established profitable global businesses.

We are recruiting for our partner company be2 (www.be2.com), one of the world's leading online matchmaking services.

Become a part of our fantastic team and join our office in the heart of **Munich** as

Chief Software Architect (m/f)

In this role you will be the technical middleman between IT and Product Management to facilitate between business and IT. You will successfully increase the technical knowledge of the IT team in terms of software architecture. Furthermore you will enable the be2 tech teams to make the right technical decision for future growth and change.

Your tasks & responsibilities

- Responsibility for the technical vision including technical product strategy, prototyping, design, implementation, testing and monitoring
- Define and develop system level architecture, system decomposition, and functional requirements allocation
- Provide technical leadership and coaching to the engineering team
- Responsibility for technical quality of the product, including quick issue identification and resolution irrespective of time
- Nurture software architecture team providing space and support for continued growth, and challenge the decisions made against technical and business needs
- Define and develop system level requirements applying lean/agile requirements methodologies
- Conduct independent technical investigations in systems design

Our offer

We can offer you the chance to join a leading internet company in Munich. You will be working in an entrepreneurial, results driven environment where fast decision making and flat hierarchical structures ensure your ideas are heard, and you quickly have the opportunity to assume responsibilities and grow professionally. Our office houses very international, dynamic and sociable teams that are often getting together for staff dinners, parties and days out as well as working hard to drive the success of be2.

Interested? Please send your application to **Andrea De Giuli** at jobs@insparx.com, referring to the job title above. Please include educational certificates, work references, your possible starting date and your salary expectations.

Your profile

- (University) Studies in IT with focus on software engineering/development
- Minimum of 5 years hands-on, professional experience with dynamic and high-scale Internet companies.
- A proven track record of analyzing, designing, testing and implementing mission-critical web applications
- Extensive expertise in software design standards and methodologies (multi-tier architecture, performance, scalability, reliability and security)
- Intimate knowledge of standard software development methodologies (Agile/XP, etc.) including analysis, design, development, testing, and code review phases of project lifecycle
- Experience in working with Java is a must
- Strong leadership and communication skills, attention to detail, leading by example
- Willingness to travel regularly to Yerevan
- Fluent in English
